<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pfingsten Rd., Northbrook Illinois 60062	Made by: <b>NSA</b>	Sheet # <b>1/21</b>
	Checked by: <b>MJS</b>	Project # <b>970798</b>
<b>Morse Industries</b> Kent, Washington <b>Glass Rail Base Molding Attachment Analysis</b>		
	Date: <b>07/22/97</b>	

## Design Criteria

The purpose of these calculations is to check the adequacy of the connection of the Morse Industries glass hand railing base shoe molding (two types - see fig. 1) to either a concrete or steel substrate. The analysis considers the adequacy of the connection when when the standard height railing (42 in.) is subjected to live loads required by model building codes. The analysis is limited to the base shoe to substrate connection. Analysis of stresses in the glass, top rail, and base shoe molding are beyond the scope of these calculations.

Analysis of glass railing base shoe connections (4 types considered)

- Case 1: Concrete surface mounted (see fig. 2)
- Case 2: Concrete flush mounted (see fig. 3)
- Case 3: Steel fascia mounted (see fig. 4)
- Case 4: Steel fascia mounted (see fig. 5)

Model Code regulations require a uniform loading of 50 lbs per lineal foot (plf) or a 200-lb concentrated load to be resisted at the top rail, whichever creates the most severe stresses.

For the base shoe connection, the 200-lb load applied in a horizontal direction at the top handrail causes the maximum stresses in the connections.

The analysis considered shear and moment due to the 200 lb load being resisted by 3 - SAE Grade 5, 1/2" diameter cap screws ( $F_u = 120,000$  psi and  $F_y = 92,000$  psi) and 2 - ASTM A307, 3/8" diameter T-bolts ( $F_u = 60,000$  psi)

### Glass Rail Base Molding Attachment Analysis

#### Caes 1 Analysis

#### Configuration

1/2" Ø Cap Screws, 1'-0" o.c.

3/8" Cap Bolts, 1'-6" o.c.

#### Applied Loads (Service)

Maximum at base: Shear  $V = 200 \text{ lbs} \rightarrow$

Moment  $M = (200 \text{ lbs})(42") = 8400 \text{ in-lbs}$

These loads act over a 3'-6" horizontal width, assuming a 45 degree distribution of load (page 1).

#### Cap Screw Connection (Screw & Aluminum checks)

#### Free Body Diagram

Molding assumed to be Relatively stiff

$\therefore \text{Arm} = 1-14"$

#### Tensile Load on One Cap Screw

$$M = 1.25 T$$

$$T = M/1.25 = 8400/1.25 = 6720 \text{ lbs}$$

Conservatively, assume 3 cap screws are effective (pg 1)

$$6720/3 = 2240 \text{ lbs}$$

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> <i>330 Pfingsten Rd., Northbrook Illinois 60062</i>	Made by:	NSA	Sheet #

	Date:	07/22/97	Project #
<b>Morse Industries</b> Kent, Washington		<b>970798</b>	
<b>Glass Rail Base Molding Attachment Analysis</b>			

### Tensile Allowable

$$F_t = 0.33 F_u \text{ (AISC Manual of Steel Construction)}$$

$$= 0.33(120 \text{ ksi}) = 40 \text{ ksi}$$

$$\text{Area} = \pi d^2 / 4 = \pi (.5)^2 / 4 = 0.196 \text{ sq. in.}$$

$$T_{\text{allow}} = F_t A = (40 \text{ ksi})(0.196 \text{ in}^2) = 7.84 \text{ kips} = 7840 \text{ lbs}$$

$$7840 \# > 2240 \text{ lbs} \quad \text{ok}$$

### Shear Load on Cap Screw

$$V = 200/3 = 66.7 \text{ lbs}$$

### Shear Allowable

$$F_v = 0.17 F_u \text{ (AISC Manual - threads included)}$$

$$= 0.17 (120) = 20.4 \text{ ksi}$$

$$V_{\text{allow}} = F_v A = (20.4 \text{ ksi})(0.96 \text{ in}^2) = 3.99 \text{ kips} = 4000 \text{ lbs}$$

$$4000 > 66.7 \quad \text{ok}$$

### Combined

By observation → ok

### Check Screw Bearing on Aluminum

Screw shank length brg on AL:  $3/4" - 0.21 = 0.54 \text{ in}$  ← Countersunk Head  
 (Ref. IFI Stds)  $3/4" - 0.5 \text{ in} = 0.25 \text{ in}$  ← Socket Head

$$\text{Bearing Area} = (.5)(.25 \text{ in}) = 0.125 \text{ in}^2$$

Allowable bearing stress on aluminum (Aluminum Spec. '94)

Table 2-23  $F_p = 24 \text{ ksi}$

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pfingsten Rd., Northbrook Illinois 60062  <b>Morse Industries</b> Kent, Washington  <b>Glass Rail Base Molding Attachment Analysis</b>	Made by: <b>NSA</b>	Sheet # <b>9/21</b>
	Checked by: <b>MJS</b>	Project # <b>970798</b>
	Date: <b>07/22/97</b>	

$$V_{allow} = F_p A_{brg} = (24 \text{ ksi})(0.125 \text{ in}) = 3.0 \text{ kips}$$

$$3000 \text{ lbs} > 66.7 \text{ lbs} \quad \text{ok}$$

### Check Screw Pullout in Aluminum

Countersunk Head

$$A_p = \pi/4 (.79^2 - .5^2)$$

$$= 0.294 \text{ in}^2$$

$$A_v = \pi dh$$

$$= \pi(.79)(3/4" - .21)$$

$$= 1.34 \text{ in}^2$$

Socket Head

$$A_p = \pi/4 (.75^2 - .5^2)$$

$$= 0.245 \text{ in}^2$$

$$A_v = \pi dh$$

$$= \pi(.75)(.25)$$

$$= 0.589 \text{ in}^2 \quad \leftarrow \text{critical}$$

### ~ Bearing Under Head

$$F_p = 16 \text{ ksi (conservative) on Flat surfaces} \sim \text{brg.}$$

$$T_{allow} = F_p A_p = (16 \text{ ksi})(.245 \text{ in}^2) = 3.92 \text{ kips} = 3920 \text{ lbs}$$

$$> 2240 \text{ lbs} \quad \text{ok}$$

### ~ Shear Plug

$$F_v = 8.5 \text{ ksi (Aluminum Spec '94)}$$

$$V_{allow} = F_v A_v = (8.5 \text{ ksi})(.589 \text{ in}^2) = 5 \text{ kips}$$

$$> 2240 \text{ lbs} \quad \text{ok}$$

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pfingsten Rd., Northbrook Illinois 60062  <b>Morse Industries</b> Kent, Washington  <b>Glass Rail Base Molding Attachment Analysis</b>	Made by: <b>NSA</b>	Sheet # <b>10/21</b>

### Check Steel Plate

1/2" thick  $\mathbb{R}$  , studs at 18in oc.

Assume 6" of plate is tributary to resist bending

$$s = \frac{bd^2}{6} = \frac{(6")(0.5")^2}{6} = 0.25 \text{ in}^3$$

$$= 2100 \text{ lbs}$$

$$M = (2100 \text{ lbs})(2") = 4200 \text{ in lbs}$$

$$F_b = \frac{m}{s} = \frac{(4.2 \text{ in kips})}{.25 \text{ in}^3} = 16.8 \text{ ksi}$$

$$F_b = 0.75 F_y = 0.75 (36) = 27 \text{ kis } \underline{\text{ok}}$$

### Check Stud in Concrete

(Ref: PCI Design Handbook, 4th edition, Chapter 6)

Factored Loads (refer to pages 6& 7)

$$V = (100 \text{ lbs})(1.7) = 170 \text{ lbs}$$

$$T = (2100 \text{ lbs})(1.7) = 3570 \text{ lbs}$$

### Bolt Geometry

As a practical minimum, select a 3" long bolt

(AISC Manual) 3/8" hex head bolt  $F = 9/16"$  (dist. across flats)

### Pull - Out Cone (Tension)

$$l_e = 3 \text{ in} \quad A_o = \sqrt{2} l_e \pi (l_e = d_h)$$

$$d_h = 9/16 \text{ in} \quad = \sqrt{2} (3) (\pi) [3.5625"] = 47.5 \text{ in}^2$$

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pvingsten Rd., Northbrook Illinois 60062  <b>Morse Industries</b> Kent, Washington  <b>Glass Rail Base Molding Attachment Analysis</b>	Made by:	NSA	Sheet #	13/21
	Checked by:	MJS	Project #	970798
	Date:	07/22/97		

$$F'c = 4000 \text{ psi (mimimum)}$$

$$\begin{aligned} \ell_{pc} &= \ell_{Ao} (2.8 \times \sqrt{F'c}) \\ &= (0.85) (47.5) (2.8) \sqrt{4000} \\ &= 7150 \text{ lbs} \quad > 3570 \text{ obs ok} \end{aligned}$$

### Shear

$$\text{Min. edge distance} = 15Db = 15 (3/8") = 5.625 \text{ in}$$

$$\begin{aligned} \ell_{Vc} &= \ell_{628db^2} \lambda \sqrt{f'c} \eta \quad \text{where } \eta = \text{number of studs} \\ &= (.85) (628) (.375)^2 (1.0) \sqrt{4000} (1.0) \\ &= 4750 \text{ lbs} \quad > 170 \text{ lbs ok} \end{aligned}$$

### Examine Shear Parameters

$$\begin{aligned} \text{Bolt length} + \text{R Thickness} &= 3" + 1/2" = 3 1/2" \\ \text{Say practical min. edge dist.} &= 1.5 (3.5) = 5 1/4" = de \end{aligned}$$

$$\begin{aligned} \ell_{Vc} &= \ell_{12.5 de} \lambda \sqrt{f'c}^{1.5} \\ &= (.85)(12.5)(5.25)^{1.5} (1.0) \sqrt{4000} = 8085 \text{ lbs} \end{aligned}$$

\* Width Effect  $C_w = 1.0$  (only one stud in group)

\* Thickness Effect  $= \frac{h}{C_t} \leq 1.0$   
 $C_t = 1.3de$

Only becomes a factor when  $h < 1.3(5 1/4) = 6 7/8"$   
 Select  $h = 5 \text{ in}$   $C_t = \frac{5}{6.875} = 0.73$

\* Corner Effect  $C_c = 1.0$

→ Keep edge distance >5 1/4" in both directions.

## ANALYSIS OF GLASS RAIL BASE MOLDING ATTACHMENT

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pfingsten Rd., Northbrook Illinois 60062  <b>Morse Industries</b> Kent, Washington  <b>Glass Rail Base Molding Attachment Analysis</b>	Made by:	NSA	Sheet #	14/21
	Checked by:	MJS	Project #	970798
	Date:	07/22/97		

$$\begin{aligned} \ell V_c &= \ell V'_c C_w C_t C_c \\ &= (8085 \text{ lbs.}) (1.0) (0.73) (1.0) \\ &= 5092 \text{ lbs} \end{aligned}$$

Other eqn still governs

(Note: A 5" min. slab thickness is a practical minimum for this  $\phi$  & bolt combination)

### Check Combined

$$P_c = 7150 / .85 = 8412 \text{ lbs}$$

$$V_c = 4750 / .85 = 5588 \text{ lbs}$$

$$\frac{1}{\ell} \left[ \left( \frac{P_u}{P_c} \right)^2 + \left( \frac{V_u}{V_c} \right)^2 \right] \leq 1.0$$

$$\frac{1}{.85} \left[ \left( \frac{3750}{8412} \right)^2 + \left( \frac{170}{5588} \right)^2 \right] \leq 1.0$$

$$\frac{1}{.85} [ .18 + .001 ] \leq 1.0$$

$$0.2 \leq 1.0 \quad \text{ok}$$

### Weld bolt to plate

$$3/8" \phi \quad \text{Length} = 2\pi r_v = (3/8") (\pi) = 1.178$$

$$T = 2100 \text{ lbs} = 2.1 \text{ kips}$$

$$V = 100 \text{ lbs} = 0.1 \text{ kips}$$

$$E70 \text{ electrodes} \quad F_v = (.3) (70 \text{ ksi}) = 21 \text{ ksi}$$

$$\begin{aligned} 3/16" \text{ weld} \quad R_w (3/16") (.707) (21 \text{ ksi}) (1.178") \\ = 3.3 \text{ kips} \quad \text{ok} \end{aligned}$$

No need to check interaction as tension dominates

## ANALYSIS OF GLASS RAIL BASE MOLDING ATTACHMENT

<b>Glass Rail Base Molding Attachment Analysis</b>		

### Case 2 Analysis

Configuration

200 lbs over 42" width

$$M = (200) (42) = 8400 \text{ in lbs}$$

$$= 8.4 \text{ in kips}$$

(at finish floor elev.)

$$M = (200) (42" + 4 \frac{1}{8}")$$

$$= 9225 \text{ in lbs}$$

$$M_u = 1.7 (9.23)$$

$$= 15.7 \text{ in kips}$$

$$V_u 1.7 (0.2) = 0.34 \text{ kips}$$

Evaluate a Resisting Couple in the Molding

FBD

$$N \approx \frac{M}{4 \frac{1}{8}"} = 15.7 / 4.125 = 3.81 \text{ kips}$$

or

$$M_A = N(4 \frac{1}{8} ") = 15.7 \text{ in kips}$$

Section A-A

Analyze as a plain concrete section

(Ref: ACI 318-95)

Section 9.3.5  $\ell = 0.65$  Strength reduction factor

Chapter 22 ~ Structural Plain Concrete

$$M_u = \ell M_n = \ell 5 \sqrt{f'_c} S \quad [\text{Eq'n 22-2}]$$

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pfingsten Rd., Northbrook Illinois 60062  <b>Morse Industries</b> Kent, Washington  <b>Glass Rail Base Molding Attachment Analysis</b>	Made by: <b>NSA</b>	Sheet # <b>16/21</b>
	Checked by: <b>MJS</b>	Project # <b>970798</b>
	Date: <b>07/22/97</b>	

Determine req'd section modulus ~ S

$$M_u = \ell \cdot 5 \sqrt{f'_c} S$$

$$S = \frac{M_u}{\ell \cdot 5 \sqrt{f'_c}} = \frac{15,700 \text{ in lbs}}{(.65)(5) \sqrt{4000}}$$

Determine min. width req'd

$$5 = \frac{bd^2}{6} \quad d = \sqrt{\frac{6S}{b}} = \sqrt{\frac{6(76.4)}{42}} = 3.3 \text{ in}$$

where b = 42" (effective width resisting the load, p.1)

From center of railing to edge

$$ED = 4/2 + 3.3 = 5.3 \text{ in} \quad \text{say } 5 \frac{1}{2} \text{ in min.}$$

~ Shear across interface

$$\begin{aligned} \ell V_n &= \ell \left(\frac{4}{3}\right) \sqrt{f'_c} b_h \quad [\text{Eq'n 22-8}] \\ &= (6.5) \left(\frac{4}{3}\right) \sqrt{4000} (42") (3.5) (1/1000) \\ &= 8.1 \text{ kips} \quad \text{ok} \end{aligned}$$

### Section B-B

Slight increase in moment; the depth at B-B will be at least 3 1/2"

$$\begin{aligned} \text{Arm} &= (42" + 4 \frac{5}{8}" + 3.5/2) = 48.375 \\ M_u &= (1.7) (48.375) (0.2 \text{ kips}) = 16.45 \text{ in kips} \end{aligned}$$

~ Check 3 1/2 in of concrete below R

$$S = \frac{bd^2}{6} = \frac{(42") (3.5)^2}{6} = 85.75 \text{ in}^3$$

$$\begin{aligned} \ell M_n &= \ell \cdot 5 \sqrt{f'_c} S = (.65) 5 \sqrt{4000} (85.75) (1/1000) \\ &= 17.63 \text{ in kips} > 16.45 \text{ in kips} \quad \text{ok} \end{aligned}$$

Glass weighs 15 psf/lin thickness

3/4" thick glass ~w = 11.3 psf

1 ft width:

$$w = (11.3 \text{ psf}) (4 \text{ ft}) = 45.2 \text{ lbs/ft.}$$

Where 4 ft height includes top handrail wt. (approx)

$$W_u = (1.4) (45.2/\text{ft.}) + (1.7) (50) = 148 \text{ lbs over 1 ft}$$

Effective Width = 3.5 ft

$$W_u (148 \text{ lbs/ft}) (3.5 \text{ ft}) = 520 \text{ lbs} \ll 8.1 \text{ kips} \quad \text{ok}$$

### Evaluate a Resisting Couple in the Steel Plate

FBD

$$M = 15.7 \text{ in. kips}$$

$$\text{Arms} = 2/3 (4") = 2.667"$$

$$C \approx \frac{15.7}{2.667} = 5.9 \text{ kips}$$

By inspection, the concrete section (3 1/2" min.) below this has the necessary capacity to resist the moment & shear ( C force) at the previously identified section B-B.

At the top, the upward reacting C force acts over an area:

$$A = (3/4") (42") = 31.5 \text{ sq. in.}$$

Check concrete bearing

$$F_p = \frac{5900 \text{ lbs}}{31.5 \text{ in}^2} = 187 \text{ psi}$$

Allowable [ACI 22.5.5]

$$F_p = \phi 0.85 f_c = (.65) (.85) (4000 \text{ psi}) = 2210 \text{ psi} \quad \text{ok}$$

## ANALYSIS OF GLASS RAIL BASE MOLDING ATTACHMENT

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pvingsten Rd., Northbrook Illinois 60062  <b>Morse Industries</b> Kent, Washington  <b>Glass Rail Base Molding Attachment Analysis</b>	<i>Made by:</i> <b>NSA</b>	<i>Sheet #</i> <b>18/21</b>
	<i>Checked by:</i> <b>MJS</b>	<i>Project #</i> <b>970798</b>
	<i>Date:</i> <b>07/22/97</b>	

### Evaluate Cap Screw Fastener

Moment slightly higher  $M = 9225$  in lbs (see page 11)

$T = M/1.25" = 9225/1.5 = 7380$  lbs

3 cap screws effective  $7380/3 = 2460$  lbs

#### Allowables

(page 4) screw tensile allowable = 7840 lbs    ok

(page 5) tensile brg under head = 3920 lbs → ok

→

: screw connection remains ok

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pfingsten Rd., Northbrook Illinois 60062  <b>Morse Industries</b> Kent, Washington  <b>Glass Rail Base Molding Attachment Analysis</b>	Made by: <b>NSA</b>	Sheet # <b>19/21</b>
	Checked by: <b>MJS</b>	Project # <b>970798</b>
	Date: <b>07/22/97</b>	

### Case 3 Analysis: Configuration

( from page 11 & 13 )  
 conservatively say  
 $M = 9225 \text{ in lbs}$   
 $N = 200 \text{ lbs} \rightarrow$   
 $P = \text{glass wt.}$   
 $= (3.5') ( 45 \text{ lbs/ft} )$   
 $= 158 \text{ lbs} \downarrow$

### Cap Screw Connection

Tensile Load on One Cap Screw

Again, conservatively assume that 3 screws are effective

Arm =  $2 \frac{1}{16}''$

$$T = \frac{M}{\text{Arm}} = \frac{9225 \text{ in lbs}}{(2 \frac{1}{16}) (3 \text{ screws})} = 1491 \text{ lbs}$$

(page 4) T allow = 7840 lbs ok

### Shear Load on Cap Screw

$$V = 520/3 = 173 \text{ lbs}$$

(page 4) V allow = 4000 lbs ok

## ANALYSIS OF GLASS RAIL BASE MOLDING ATTACHMENT

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pfingsten Rd., Northbrook Illinois 60062  <b>Morse Industries</b> Kent, Washington  <b>Glass Rail Base Molding Attachment Analysis</b>	Made by: <b>NSA</b>	Sheet # <b>20/21</b>
	Checked by: <b>MJS</b>	Project # <b>970798</b>
	Date: <b>07/22/97</b>	

(page 5) Brg. on aluminum with 1/4" min.  
 V allow = 3000 lbs  
 ok

(page 5) Brg. on aluminum under head for tensile load  
 T allow = 3920 lbs ok

Check Allowable Tensile Capacity into  $R$  or <

(page 6) Min. Steel Thickness (MT) = 0.56"

for 1/2" Reduction =  $.5/.56 = 0.88$   
 T allow =  $(7840) (.88) = 6900$  lbs ok

for 3/8" Reduction =  $.375/.56 = 0.67$   
 T allow =  $(7840) (.67) = 5250$  lbs ok

: As a practical minimum, use 3/8" thick steel

Check screw bearing in Steel Angle

Say t = 3/8" screw  $\varnothing = 1/2$ "  
 A36 steel Fu = 58 ksi (Ref: AISC Manual)

$V_{\text{brg-allow}} = (3/8") (1/2") (1.2) (58 \text{ ksi})$   
 = 13 kips ok (does not control)

## ANALYSIS OF GLASS RAIL BASE MOLDING ATTACHMENT

<b>WJE</b> <b>Wiss, Janny, Elstner Associates, Inc.</b> 330 Pfingsten Rd., Northbrook Illinois 60062  <b>Morse Industries</b> Kent, Washington  <b>Glass Rail Base Molding Attachment Analysis</b>	Made by: <b>NSA</b>	Sheet # <b>21/21</b>

	Date: <b>07/22/97</b>	

### Case 4 Analysis: Configuration

( from page 11 & 13)

M = 9225 in lbs

N = 200 lbs →  
DL

P = (3.5') (45)  
= 158 lbs ↓

### Cap Screw Connection

Arm = (2 1/2) (1/2) = 1 1/4" Again, 3 screws effective

$$T = \frac{M}{\text{Arm}} + \frac{9225}{(3)(1.25)} = 2460 \text{ lbs}$$

(page 4) T allow = 7840 lbs ok

(page 5) T allow = 3920 lbs ok (brg under head)

(page 16) T allow = 5250 lbs ok (3/8" R grip)
